

FULL STACK DEVELOPMENT

DATE:19/5/26

DAY:2

TOPICS COVERED:

- INTRODUCTION OF JAVA
- PROGRAMMING LANGUAGE
- TYPES OF LANGUAGE
- WHAT IS JAVA
- WHY WE LEARN JAVA

INTRODUCTION:

Java was invented by James Gosling in 1995 while he was working at Sun Microsystems.

The Java was previously named as Oak, but already this name was used in another company. Later, the team decided to name it as Java.

PROGRAMMING LANGUAGE:

A programming language is a formal way to give instructions to a computer so it can perform specific values. It has a bridge between humans and machines.

TYPES OF LANGUAGE:

Low level language: Machine language, Assembly language

High level language: Java, Python (human understandable language)

Medium language: C, C++

WHAT IS JAVA:

Java is a high level truly object oriented class based programming language. Bottom of approach, and **JVM** it helps to run the Java code.

WHY WE LEARN JAVA:

From desktop to software to mobile apps, platform independence, write once run anywhere (WORA), strong job opportunities, object oriented programming.
